

NICOLÁS MARSET

COMPUTER ENGINEERING STUDENT

 Mar del Plata, Buenos Aires, Argentina

 21 years old

 nicolasmarsetg@gmail.com

PROFESSIONAL PROFILE

Computer Engineering student at Universidad Nacional de Mar del Plata, interested in software development, digital systems and building functional solutions.

I focus on understanding complex problems, designing efficient solutions and developing quality software, prioritizing user experience, maintainability and scalability.

I am currently developing my own projects to apply software engineering, system architecture and modern technology concepts, with a mindset of continuous improvement and constant technical learning.

TECHNICAL BASE

- Object-oriented programming
- Data structures and algorithms
- Software design and architecture
- Relational databases (SQL)
- Data modeling and normalization
- REST APIs and client-server communication
- Version control (Git)
- Design patterns and best practices
- Agile methodologies (SCRUM)
- Systems analysis and design
- Business logic
- Software testing and debugging
- Deployment and web environments (Vercel, Netlify)

COMPETENCIES

- Analysis and resolution of complex problems.
- Logical thinking and abstraction.
- Design of efficient and scalable solutions.
- Ability to learn and adapt to new technologies.
- Autonomous work and time management.
- Attention to detail and code quality.
- Technical communication and teamwork.

ACADEMIC BACKGROUND

Computer Engineering

Universidad Nacional de Mar del Plata

IN PROGRESS

University education oriented toward programming, logic, mathematics, systems analysis, information technologies and structured problem solving.

React Front-End Development Program

Coderhouse

COMPLETED

Training focused on the development of modern web interfaces with React, reusable components, state management, API integration and front-end development best practices.

FEATURED PROJECTS

Management System

Web application in continuous evolution focused on centralizing operational processes: clients, estimates, orders, payments, business tracking and monthly analysis.

Main features:

- Management of clients and associated records.
- Creation of printable estimates and documents.
- Order management and payment status tracking.
- Monthly summary and operational indicators.
- Professional interface oriented toward real use.

Professional Portfolio

Personal website designed to present my technical profile, education, projects, professional focus and evolution as a future computer engineer.

Areas worked on:

- Site design and architecture.
- Interaction and user experience.
- Animations and visual effects.
- Responsive design.
- Organization and presentation of technical content.

WORK APPROACH

01 Problem analysis

Identification of the context, users, processes and main needs.

02 Solution design

Data modeling, architecture definition, modules and information flows to create efficient solutions.

03 Implementation

Software development applying good practices, scalable structures and maintainable code.

04 Optimization

Continuous improvement of performance, usability, security and scalability of solutions.
